

Easy on the Fingers Tie Method for Double Bubble Latex

Step 1

Step 2

Step 3

Tying Double Bubble balloons can be hard on your fingers. Use the same tying method as shown for a single latex balloon, but first hold the neck of the inside balloon closed and pull to set it into the opening of the outside Crystal Clear balloon so it doesn't leak and then tie it into a knot. You must make sure you wrap the inside balloon neck around the neck of the clear outside balloon for a no-leak knot that is easy on your fingers rather than tying the doubled necks into a single knot.
